

# Dreamline®

Quality Bedding Since 1963

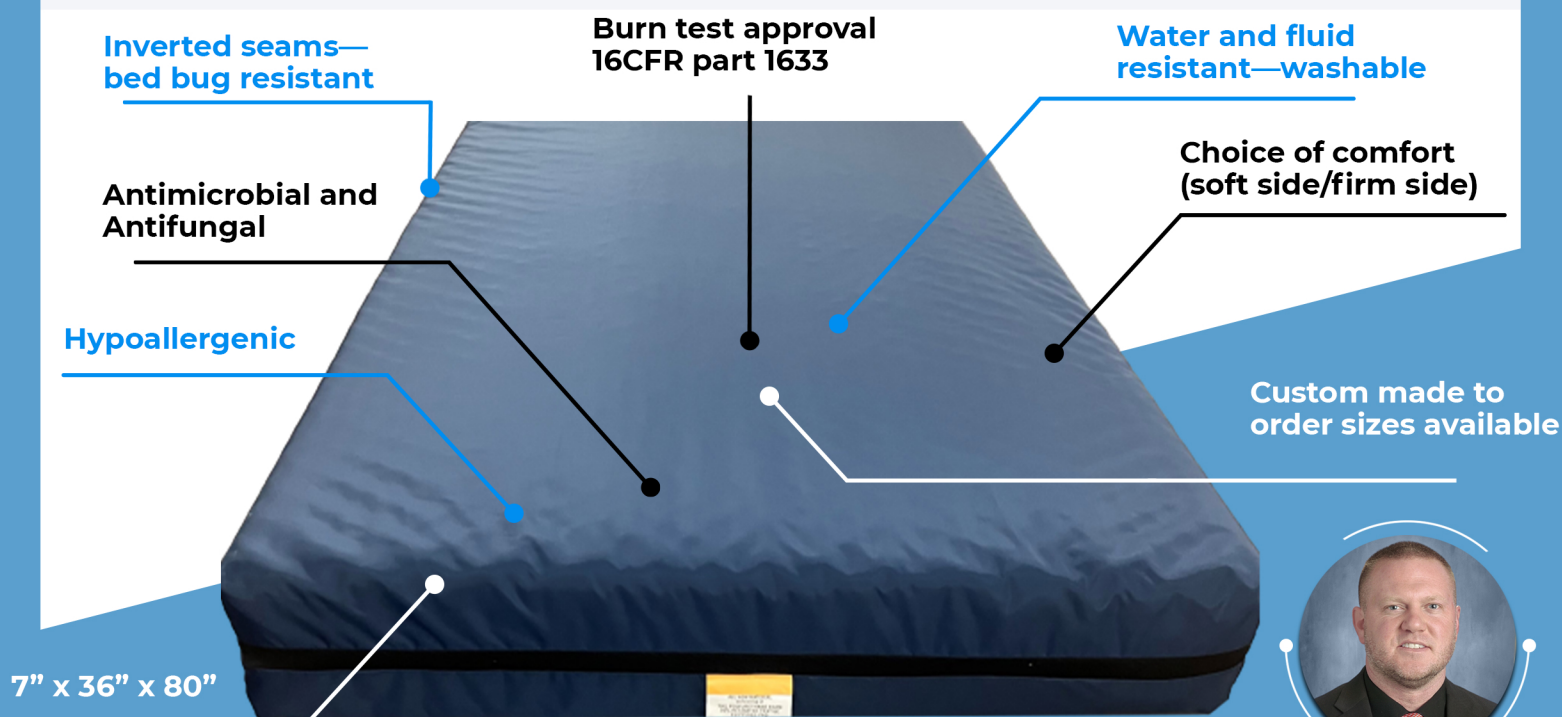

**America's most trusted  
brand name in bedding  
for student housing.**

## THE **#1** DORM MATTRESS FOR COMFORT HEALTH & SAFETY

Our Dreamline® student mattress is built to withstand the rigors of residence hall use. Within the mattress is a low profile 13-gauge high carbon innerspring unit. The perimeter of the mattress contains ultra firm edges to prevent edge collapse. The institutional grade density (1.8 lbs./ft3) foam ensures the bed will not flatten out.

Our inverted lock stitch seam design means there are no tape edge seams to break open. An inverted seam also makes it virtually impossible for body fluids to penetrate the mattress. Bedbugs love to nest in the "tape edge" seams of conventional mattresses. Our mattresses are designed with a special inverted seam, providing the most protection and resistance to bedbugs in the market.

This mattress is plush on one side and firm on the other to accommodate multiple sleeping preferences. The plush side contains luxurious high resilient pressure reduction foam for maximum surface comfort combined with the upmost support. The firm side contains firm (but not "rock hard") convoluted foam for maximum back support. It contains 2" of premium quality foam on each side; twice the amount used in traditional taped edge residence hall innerspring mattresses. Our cover allows maximum breathability, dramatically less body heat buildup, and increased comfort when compared to conventional vinyl covered mattresses.
